Rounder. Brighter. Ready to wobble.

Actual rebuilt 3D meshes: Pip, Berry and Mango. Soft dough, short crests, broad readable faces.

The concept target.

AI generated design reference made before rebuilding the models. This page is concept art, not a render of the delivered geometry.

Squash, blink, hop.

Actual evaluated Blender rig poses. Eight 60 fps clips per character; held pull and reactive spring motion are also implemented in Godot.

The big escape: one playable level.

Blender art proof matching the level start. Four Pips, a jelly bumper, one Mango gate and an escape plate. Not a Godot runtime screenshot.

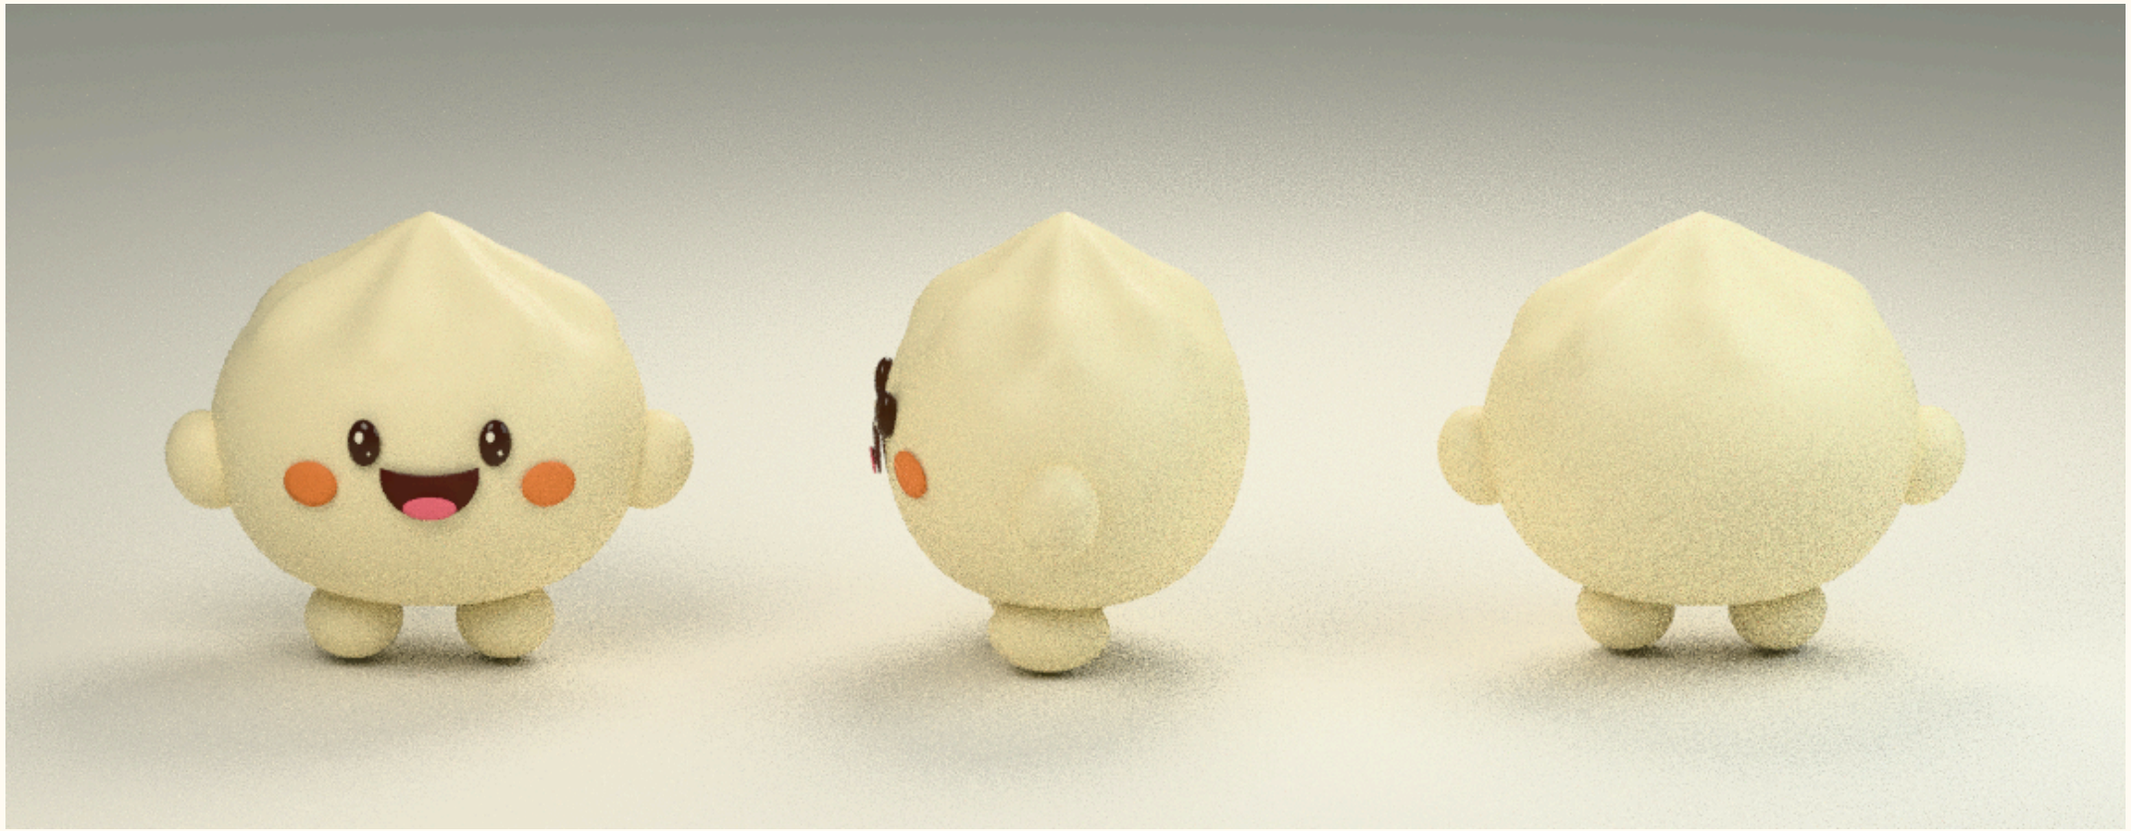

Pull backwards and release. Pip + Pip = Berry. Berry + Berry = Mango. The Mango opens the gate at any speed.

Undo, Retry, pause, mute and a verified Show me replay are included. Unlimited attempts.

Pip / cream mochi

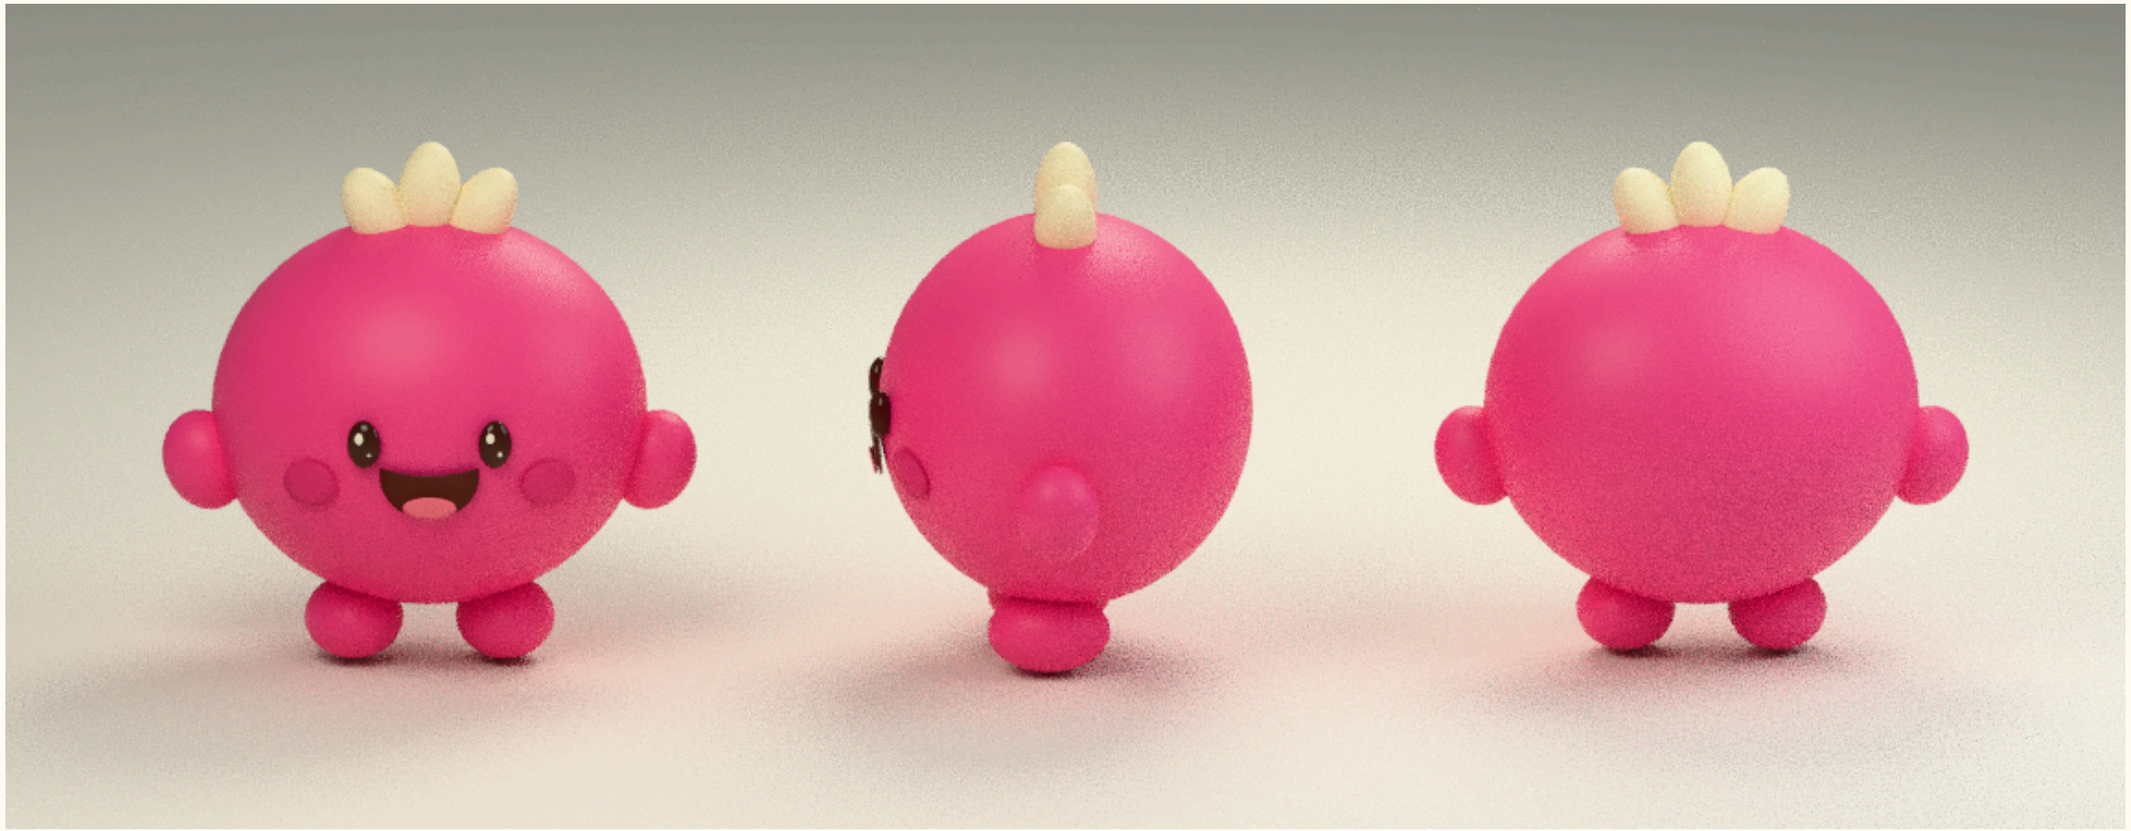

Actual model turnarounds. Editable .blend sources and GLB exports are included.

FRONT SIDE BACK

Berry / bright strawberry

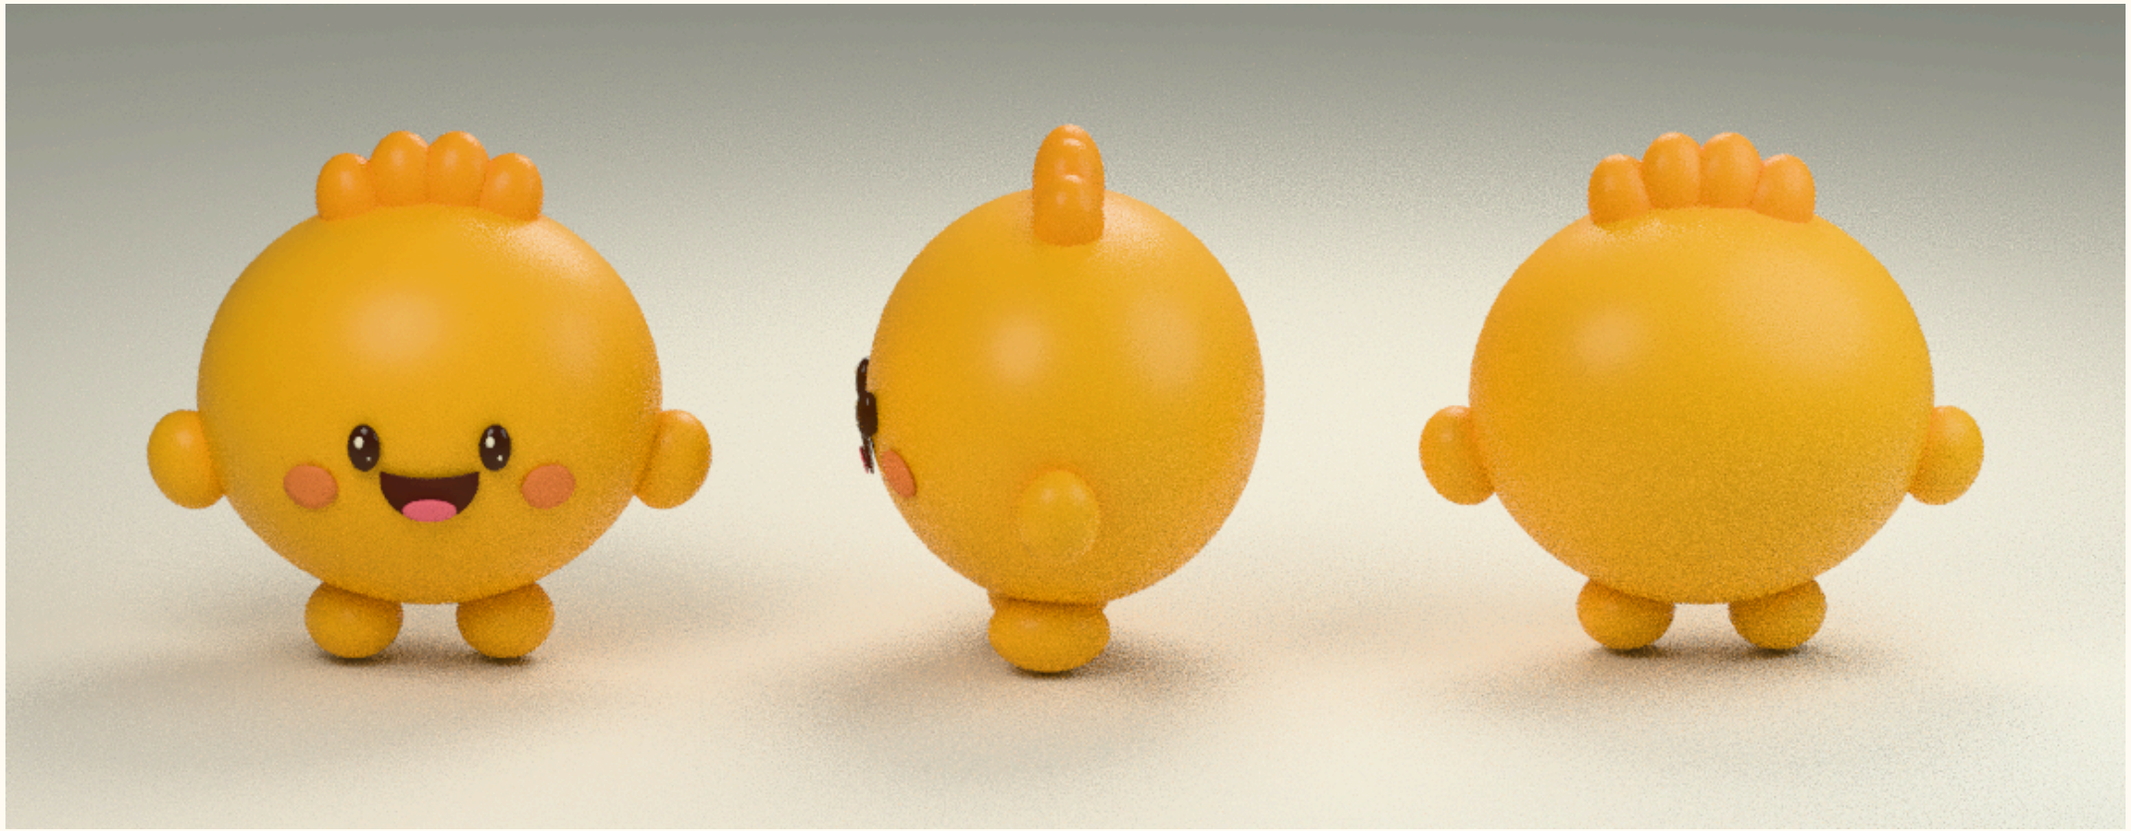

Actual model turnarounds. Editable .blend sources and GLB exports are included.

FRONT SIDE BACK

Mango / golden sunshine

Actual model turnarounds. Editable .blend sources and GLB exports are included.

FRONT SIDE BACK

Open it in Godot. Play it.

Godot 4.6.3 Standard / Compatibility renderer / touch and mouse / one polished slice

1. Unzip the Godot project and import project.godot.
2. Let the GLB assets import. Press F5 to play main.tscn.
3. Drag backwards from a bun, hold and release.
4. Use Show me for a four-shot solution produced by the same physics.
5. Open atelier.tscn and press F6 to inspect all assets and named clips.

VERIFIED IN HEADLESS GODOT

48 passing checks: real GLB imports and clip playback, held touch aiming and cancellation, immediate release, physics aim preview, Undo/Retry, pause/mute, tier gates, fast jelly contact, simultaneous merges and complete escape. Replays at 30/60/120 render FPS produce identical solver states.

DELIVERED

3 rigged characters, 5 props, 24 named clips, 11-bone rigs, editable morphs, Blender sources, GLB exports, Godot project, turnarounds and transparent previews.

STILL PENDING

A rendered Godot capture, Android APK and physical phone performance review. The environment-access step for a graphics window and official SDK/template downloads was cancelled before execution. The art proofs do not replace those checks.
